COAST DOOR LATCH ADJUSTMENT

COAST DOOR #1 - #10

RELEASE DATE:	28 TH JULY 2023
PRODUCT:	COAST ACCESS DOORS
APPROVED BY:	A.Rouco per M.Lironis
VERSION NUMBER:	1.0

There is very little adjustment available on these latches. The adjustment is delicate as over adjusting will result in an inoperable latch.

With the door open and latch in the unlatched position:

1. Wind down Nut #1 until the cam pulls into position completely when the lever is latched, some resistance should be felt at the end of the stroke, this will prevent the nut from moving when door is shut/travelling.
2. Now adjust nuts# 2 & 3 to bring the tang to a position that allows the door to pull in fully.

Do not adjust too tight as the external latching lever may not drop correctly into position to allow smooth locking with the key, if this happens back off slightly.
