SPHERE™ WIRELESS LIGHTING CONTROL SYSTEM

Wires? Who needs the hassle, the cutting, the threading?

The Sphere™ Wireless Lighting Control System is the way of the future—and better yet, is that you can even operate it with a remote control!

So how does the Wireless Lighting Control System work?

Well, for starters you need the 6 Channel Receiver (pictured left). It can control the lighting to six individual zones e.g. the kitchen, the bathroom etc. A simple pairing procedure allows for multiple switches to be programmed to each zone and vice versa.

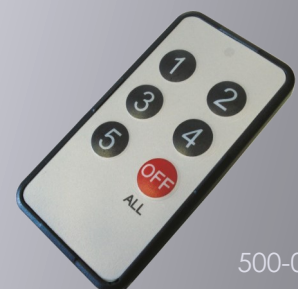

The master OFF function is available with all switches, enabling the user to turn all

lights in all zones off with one button. Alternatively, the Wireless Remote Control (pictured right) can be used.

The programming procedure is extremely simple and extra switches can be reprogrammed to the receiver at any time.

Want a true Wireless experience? Why not purchase the remote control?

It is a six button, multifunction remote control with six channels, thus giving the user flexibility in tailoring the system to their needs. For example, the user might have gone for a walk and upon returning to their RV, with the remote in their pocket, they can turn the RV lights on as they approach!
